

Wind Tre arrives in Rome with ultrafast fiber services

Rome, 3rd september 2019

Wind Tre reaches the city of Rome with ultra-fast FTTH fiber up to 1 Gigabit per second, starting from the Torrino neighborhood. Wind Tre continues expanding its ultra-fast connectivity on the Italian territory through the ultra-fast Fiber To-The-Home (FTTH) technology of Open Fiber. The services, available directly in the homes of citizens, shops and companies, are already active in Torrino neighborhood, south-west area of the city, characterized by the presence of two skyscrapers, with a complex of modern residential, office and commercial buildings. In the coming weeks, further areas of Rome will be reached, through a 100% fiber-optic infrastructure, able to guarantee maximum performance.
