

WINDTRE publishes the 2021 Sustainability Report

For a more responsible, inclusive and green future

Rome, 30th June 2022

WINDTRE presents the 2021 Sustainability Report, confirming its commitment to an increasingly responsible and green future, in which technology represents a key driver for social inclusion to 'eliminate any distance between people'. Last year, the company identified its 2024-2030 sustainability goals, covering all the ESG dimensions (Environmental, Social, Governance), in line with the UN 2030 Agenda. Many of them have already reached significant results. Sustainability is integrated in all business activities and also included in the incentive system for the management.

"We have always been committed to producing ideas and solutions to build a more sustainable future", said Federica Manzoni, Director of Sustainability & Quality Certification of WINDTRE. "We have redefined our model around three areas: more responsibility, more humanity and more green. For each of them, we have already implemented various lines of action and are committed to achieving increasingly ambitious results in the medium-long term".
